Summary

Software Engineer and SRE Team Lead with 4+ years building full-stack .NET products and 3+ years embedding reliability directly into customer-facing SaaS at scale. I work at the intersection of product engineering and operational excellence — assisting with system design, incident response, and observability architecture while writing and shipping production code. Known for translating reliability risk into business impact and building the tooling, processes, and culture that let engineering teams move fast without breaking things.

Technical Skills

- Languages: Visual Basic, C#, C, Python, Java, JavaScript, HTML, CSS, SQL, Terraform
- Frameworks: Entity Framework, ASP.NET Core MVC, ASP.NET Core Web API, WPF
- Developer Tools: Visual Studio, VS Code, Git, Azure DevOps, JIRA, Confluence, Postman, SOAPUI
- Observability Platforms: New Relic
- Cloud Platforms: Microsoft Azure

Education

University of Texas at San Antonio – San Antonio, Texas August 2020 – December 2022
Bachelor of Science, Computer Science with Software Engineering Concentration

Experience

SRE Product Reliability Engineer December 2021 – Present
Invoice Cloud – Brownsville, TX (Remote)

- Led a product-focused SRE team responsible for embedding reliability, scalability, and operability directly into customer-facing SaaS products.
- Partnered with Product Managers and Engineering Leads to influence feature design with reliability-first architecture and failure-mode analysis.
- Wrote and maintained production code and internal reliability tooling to improve service stability and developer experience.
- Triaged high-severity incident response for core product domains; improved MTTR through better alerting, automation, and runbook standardization.
- Designed, implemented, and deployed machine learning based solution to auto-triage incoming support tickets.
- Built and standardized observability practices using metrics, logging, and distributed tracing to provide actionable insight into product health.
- Reduced alert fatigue by improving signal quality and aligning alerts to customer-impacting symptoms.
- Mentored and developed SRE engineers, setting technical direction, reviewing designs, and coaching team members on reliability best practices.
- Advocated for sustainable on-call practices and operational readiness across product engineering teams.
- Communicated reliability risks and investments in business terms to leadership, customer teams, and stakeholders.
